

## The LIKO-12 future

① The project should be really defined what it is:

LIKO-12 is a fantasy computer / virtual computer,

So it's a virtual computer, this means it's a sandboxed environment that runs as a program on real computers, fantasy means that there is no actual hardware, and the specification doesn't make much sense, the specifications are chosen in a way that makes it easy to work with in today's aspects.

The graphics are low in resolution and colors, but are strong in drawing operations, so it's not a pain, the processor runs at the highest speed using language, no low level language. the lua byte-code is disallowed for security reasons. The filesystem is strong in it's operations, but also limited in it's available space due to again, security reasons. The <sup>fantasy</sup> computer comes with a default operating system, which has an embedded tools to let you
