LIKO-12 Initialization Procedger:

1. Load the events system
2. Hook it with the LÖVE events
3. Index the available peripherals
4. Pre-load them
5. Load the config file which will initialize the peripherals in the correct order and with the correct configurations.
6. Execute the Basic Integerated Operating System (BIOS)
7. Let the LÖVE events flow do it's job.
8. That's it!

But in the library mode, we have to add the support for multi-computers multi-instances......
